BEAM 21

BLENDED CAPACITY-BUILDING
ON SUSTAINABLE ENERGY MEASURES
AND ACTION PLANS FOR EUROPEAN
MUNICIPALITIES

BEAM's contribution to urban futures

Cities and municipalities are one of the most important actors to reduce GHG emissions.

Housing stock and urban development planning plays an important role in this, but they are linked to many other action fields in a very complex manner

BEAM 21 steps in at this point

ning offer

BEAM 21 is developing and implementing capacity building training programmes for European municipalities on municipal climate protection and intelligent energy measures

key objective: To encourage municipalities to address intelligent energy concepts and take relevant measures at their level that can result in GHG savings.

training in short

blended-learning: self-directed supervised online learning
combined with on-site seminars

dealing with municipal climate protection and intelligent
energy management

target group: municipal staff and municipal decision
makers (two different courses)
